## Environmental Policy JENOPTIK Robot GmbH

The future is not a matter of destiny, but a result of the decisions we make today.  
(Franz Alt)

The protection of the environment and sustainable management are hence the responsibility of all of us.

The management and all employees strive to avoid negative impacts on the environment and to behave and operate in a sustainable and environmentally responsible manner.

### Everyone commits!

We are committing ourselves to comply with all applicable and valid environmental regulations and binding obligations. We constantly review all our environmentally relevant processes for possible improvements and evaluate new products and processes for their environmental impact before they are implemented. Wherever we can have an active influence, we implement the best possible, practicable environmental protection as required by law.

### Everybody joins in!

Management and employees are provided with training and information to assist them in acting responsibly and sustainably in the meaning of environmental protection in the company and are encouraged and empowered to implement environmental policy goals.

### We always want to go the extra mile!

Our organization's environmental management supports employees in their activities to improve environmental performance. The environmental policy is an essential part of the company's policy for all employees. Goals and measures are made transparent in training courses and through notices by mail or on boards. All ideas for improving environmental performance are welcome, reviewed and evaluated, and implemented where possible. We make our environmental policy transparent and accessible to the interested public, suppliers, authorities, and customers. We evaluate environmental requirements resulting from this context and integrate them into our environmental management.
